## Experiment - 10

**Student Name:** Saksham

**UID:** 23BCS13613

**Branch:** BE-CSE

**Section/Group:** KRG\_2B

**Semester:** 5<sup>th</sup>

**Date of Performance:** 27/10/25

**Subject Name:** Advanced Database and Management System

**Subject Code:** 23CSP-333

### 1. Problem Description/Aim:

To perform and understand fundamental MongoDB operations — including insertion, reading, updating, deletion, and aggregation — for efficient data handling and management in a NoSQL database environment.

### 2. Objective:

1. To learn how to insert single and multiple documents using insertOne() and insertMany().
2. To apply various find() queries for data retrieval, including conditional and projection-based queries.
3. To practice updating records using updateOne(), updateMany(), \$push, \$pull, \$unset, and \$upsert.
4. To execute deletion commands (deleteOne(), deleteMany()) and aggregation using \$group and \$sum for data analysis.

### 3. MONGODB OPERATION AND OUTPUTS -

```
test> use bookstore_db
switched to db bookstore_db
bookstore_db> db.books.insertOne({
...   title: "The Alchemist",
...   author: "Paulo Coelho",
...   genre: "Fiction",
...   price: 450,
...   pages: 208,
...   publisher: "HarperCollins",
...   fuel_type: "N/A",
...   features: ["Inspirational", "Adventure"],
...   available: true
... })
{
  acknowledged: true,
  insertedId: ObjectId('6904922c66c37ffc0663b112')
}
bookstore_db>
```
